

RUNNING MICRO GAITER

DESCRIPTION

Micro gaiter for the protection of the shoe's upper part, the ankle and the lower tibial area. It prevents snow, mud and gravel from entering the shoe, thus keeping the area perfectly dry and clean and favouring optimal thermoregulation of the foot.

It allows the runner to use in perfect comfort a mountain running shoe with a Gore-tex membrane, keeping the foot perfectly dry.

The assembly of membrane fabrics with SEAMLESS technology (without seams) guarantees total waterproofing of the garment. The WATER REPELLENT treatment prevents the outer part of the fabric from becoming drenched.

The anchoring system in the front part of the shoe on the shoe's laces, combined with the inner silicone band and the speed lace, guarantee perfect adherence and stability on the shoe.

Lycra cuff with velcro closure to allow a comfortable fit combined with a perfect closure on the top.

The brand and fluorescent LEFT and RIGHT markings accentuate the runner's visibility.

MAIN USE

Developed and tested to satisfy the most demanding winter & alpine runners. Perfect for those who love to move fast & light on the mountains even in winter conditions.

TECHNICAL SPECIFICATIONS AND FUTURES

- ❖ Special technical fabric with overlapping membranes, waterproof and water-repellent.
- ❖ Excellent breathability.
- ❖ Assembly with SEAMLESS technology.
- ❖ Absence of seams that promote the penetration of water.
- ❖ Speed lace insole for micro adjustment (replaceable).
- ❖ Adjustable cuff on the tibia with velcro closure.

OTHER FUTURES
